

AUTOMATION AUTOMATE EASY

Our cloud solution helps you to easily monitor and maneuver your snowmaking system. In order to maintain a reliable system, Innosnow uses PLC controls for demanding applications.

INNOSNOW CLOUD

Our cloud solution helps you to easily monitor and maneuver your snowmaking system. With our app for smartphone or web and PC, you keep track of pumps and weather stations and start and stop snow guns.

The cloud gives you notification of disturbances or errors. In the cloud you can read history and see diagrams for desired parameters.

COMMUNICATION

All systems need some form of connection to the internet. When it is missing, Innosnow can offer connection to the network via Mobile / GSM or Optical fiber. Mobile connection may be suitable for single machines such as remote pumping stations, weather stations or fan guns.

For larger fixed installations, we prefer to use optical fiber.

PLC-CONTROLS

In order to maintain a reliable system, Innosnow uses PLC controls for demanding applications. We build controls based on a modular mindset so that future additions can be made without extensive rebuilds.

Touch screens and simple parameter lists facilitate fine-tuning to get a powerful, stable system.
